Rev-caspases are cysteine proceases that specifically cleave proteins subunit is N-terminal to a large subunit. A gene delivery vehicle comprising a rev-caspase coding sequence is useful for the treatment of cancer, where the gene delivery vehicle is internalised by tumour cells. The gene delivery vehicle can also be used, to treat autoimmune diseases. Cells transfected with a rev-caspase expressing vector can be used in identification of inhibitors or enhancers of caspase—mediated apoptosis. In vitro translated rev-caspase can be used to identify an inhibitor or enhancers of caspase inhibitors are useful for treating neurodegenerative diseases as well as for inhibiting apoptosis in the heart following myocardial infarction. The present sequence represents the amino acid sequence of rev-caspase-6.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Rev-caspase; cysteine protease; zymogen; caspase; cancer; gene therapy; autoimmune disease; caspase-mediated apoptosis; neurodegenerative; tumour cell; myocardial infarction; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to nucleic acid molecules encoding rev-caspases

                                                                                                                                                                                                     The protein sequence was deduced from the DNA sequence of the expression vector pmTNF-MPH which was used for the expression of a fusion protein comprising the first 25 amino acids of murine TNF, a synthetic 6 His linker allowing for purification by metal affinity chromatography and a fragment of the 34 kD p362 protein from Mycobacterium paratuberculosis. The purified fusion protein may be used to assay for M. paratuberculosis infections, e.g. Johne's disease in cattle or other animals and possibly crohn's disease in humans. See also AAR27491-3.

The present sequence represents a fusion protein comprising a Hepatitis C virus (HCV) NS3 protein. The NS3 polypeptides are used in a solid phase immunoassay comprising a HCV antigen (preferably a NS3 helicase or NS3 protease protein) in the presence of reducing agent on the solid phase. Use of the reducing agent and purification of the antigen using antibodation and desulphonation steps increases its reactivity to HCV antibodies and enables an earlier detection of HCV infection. The assay is used for detecting antibodies raised against the HCV antigen. The polypeptides are used for preventing and treating HCV infection. The polypeptides are also used for diagnosing hepatitis infection. The antibodies to these polypeptides are used for diagnosing hepatitis infection. The antibodies to these polypeptides are used for providing passive

The present sequence represents a fusion protein comprising a Hepatitis C virus (HCV) NS3 protein. The NS3 polypeptides are used in a solid phase humunoassay comprising a HCV antigen (preferably a NS3 helicase or NS3 protease protein) in the presence of reducing agent on the solid phase. Use of the reducing agent and purification of the antigen using antibodies and enables an earlier detection of HCV infection. The assay is used for detecting antibodies raised against the HCV antigen. The polypeptides are used for preventing and treating HCV infection. The antibodies real enables and enables and enables and entibodies are used for preventing and treating HCV infection. The antibodies to these polypeptides are used for diagnosing hepatitis infection. The antibodies to these polypeptides are used for preventing and preating infection. The antibodies to these polypeptides are used for providing passive

The present sequence represents a fusion protein comprising a Hepatitis C virus (HCV) NS3 protein. The NS3 polypeptides are used in a solid phase humunoassay comprising a HCV antigen (preferably a NS3 helicase or NS3 protease protein) in the presence of reducing agent on the solid phase. Use of the reducing agent and purification of the antigen using sulphonation and desulphonation steps increases its reactivity to HCV antibonation and antibodies and enables an earlier detection of HCV infection. The assay is used for detecting antibodies raised against the HCV antigen. The polypeptides are used for preventing and treating HCV infection. The polypeptides are also used for diagnosing hepatitis infection. The antibodies to these polypeptides are used for preventing and treating HCV infection. The antibodies to these polypeptides are used for proventing and preparation and passive

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a fusion protein comprising a Hepatitis C virus (HCV) NS3 protein. The NS3 polypeptides are used in a solid phase immunoassay comprising a HCV antigen (preferably a NS3 helicase or NS3 protease protein) in the presence of reducing agent on the solid phase. Use of the reducing agent and purification of the antigen using sulphonation and desulphonation steps increases its reactivity to HCV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /note= "these residues represent the non-NS3 sequence, which is the mINF fusion partner, the hexahistidine tag and part of the

The present sequence represents a fusion protein comprising a Hepatitis C
antibodies and enables an earlier detection of HCV infection. The assay is used for detecting antibodies raised against the HCV antigen. The polypeptides are used for preventing and treating HCV infection. The polypeptides are also used for diagnosing hepatitis infection. The antibodies to these polypeptides are used for providing passive

virus (HCV) NS3 protein. The NS3 polypeptides are used in a solid phase immunoassay comprising a HCV antigen (preferably a NS3 helicase or NS3 protease protein) in the presence of reducing agent on the solid phase. Sulphonation and desulphonation of the antigen using antibodies and enables an earlier detection of HCV infection. The assay la used for detecting antibodies raised against the HCV antigen. The polypeptides are used for preventing and treating HCV infection. The antibodies are also used for diagnosing hepatitis infection. The antibodies are also used for diagnosing hepatitis infection. The vaccination and the end of the

The present sequence represents a fusion protein comprising a Hepatitis (virus (HCV) NS3 protein. The NS3 polypeptides are used in a solid phase bimunoasasy comprising a HCV antigen (preferably a NS3 helicase or NS3 protease protein) in the presence of reducing agent on the solid phase. Sulphonation and desulphonation steps increases its reactivity to HCV antibonation and desulphonation steps increases its reactivity to HCV antibonation and enables an earlier detection of HCV infection. The assay is used for detecting antibodies raised against the HCV antigen. The polypeptides are used for preventing and treating HCV infection. The antibodies to these polypeptides are used for diagnosing hepatitis infection. The antibodies to these polypeptides are used for greventing and treating HCV infection. The antibodies to these polypeptides are used for grandless for providing passive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Amino acid sequence of the mTNFH6NS3 Type 3a clone 32 fusion protein.
New hepatitis C-virus polypeptide used for treating the infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            sequence, which is the mTNF fusion partner, the hexahistidine tag and part of the

27-JAN-1997;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a fusion protein comprising a Hepatitis C virus (HCV) NS3 protein. The NS3 polypeptides are used in a solid phase finanuosassay comprising a HCV antigen (preferably a NS3 helicase or NS3 protease protein) in the presence of reducing agent on the solid phase. Use of the reducing agent and purification of the antigen using
                                                                                                                                                                                                                                                                                                                                        sulphonation and desulphonation steps increases its reactivity to HCV antibodies and enables an earlier detection of HCV infection. The assay is used for detecting antibodies raised against the HCV antipon. The polypeptides are used for preventing and treating HCV infection. The polypeptides are also used for diagnosing hepatitis infection. The antibodies to these polypeptides are used for many expectation and the providing passive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqp-embl/AA1996.DAT:AAR97229
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Brucellosis; vaccine; antigen; diagnosis; ELISA; Escherichia coli.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  NAME OF COLORS O
```

```
A fusion protein (AAR97229) is composed of an N-terminal 37-amino acid sequence derived from vector pIGFIO (including a hexahistidine leader peptide), and the 17 kba antigen (see also AAR97225) of Brucella abortus. It was obtd. following PCR amplification (see also AA728817-18) of the 17 kba antigen gene (AA728816), its insertion into pIGFHIO and expression in Sechetichia coll. The fusion protein was used in competition ELISAs to study the reaction of Brucella positive sera. It can also be used in indirect ELISA to determine anti-Brucella antibodies present in a sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqp-emb1/AA1997.DAT:AAW26698
                                                                                                                                                       Isolated 17kD Brucella antigen - used to develop prods. to detect, and provide protective immunity against Brucella infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Tg20; antigen; toxoplasmosis; infection; therapy; diagnosis;

New isolated Toxoplasma gondii antigen Tg20 - used to develop products for the diagnosis and prevention of {\bf T}_{\cdot} gondii infection in
                                                                                                                                                                                                                                                                                                                           This sequence comprises a fusion protein composed of the mouse tumour necrosis factor leader peptide, a polyhistidine tag, and antigen Tg20 (see AAW26692) of Toxoplasma gondii. A vector containing DNA encoding the fusion protein was used to transform Escherichia coli MNIO61 host cells for production of recombinant Tg20. Antigen Tg20 polypeptides and immunodominant peptides (see AAW26693-97) can be used in claimed methods for the diagnosis and prevention of T. gondii infection in mammals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqp-emb1/AA2001.DAT:AAG67271

A molecule comprising an S.aureus NAD synthetase or NAD synthetase-like substrate binding pocket with defined structure coordinates for identifying inhibitors of NAD synthetase for rational drug design -
                                                                                                                                                                            The present sequence represents a NAD synthetase, designated NadE, which is isolated from Staphylococcus aureus. The NadE polypeptide is defined by a set of points with a root mean square deviation of less than about 1.1 Angstrom from points representing the backbone of the amino acids as represented by structure coordinates fully defined in the specification. The protein-coordinate data for NadE is useful for identifying and making an inhibitor of NadE activity. It is also useful for for drug discovery using rational drug design. The data is useful for solving the structure of other crystal forms of S.aureus NadE or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqp-emb1/AA2001.DAT:AA011238
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukaemia, inflammation and immune

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AAO00010-AAO19910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, haematopoiesis regulating activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Interleukin; IL-17C.his; PRO1122 polypeptide; clone DNA62377-1381-1; immunoprecipitation; IL-17 receptor extracellular domain; IL-17R ECD; cytokine IL-17; hybridisation probe; antagonist; Gly(His)8 tag; agonist; degenerative cartilaginous disorder; diagnose; therapy.
                                                                                                                                                                                                                                 Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqp-embl/AA2000.DAT:AAY44485
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /label- Mature_IL-17C_polypeptide

```
The present sequence is the human PRO1122 polypeptide, with a C-terminal Gly(His)8 tag, IL-17C.his, derived from the clone DNA62377-1381-1. This sequence is used in a competitive binding experiment for the immunoprecipitation of IL-17 receptor extracellular domain (IL-17R ECD). The entire coding region of IL-17C can be used as hybridisation probe. The PRO1122 polypeptide, agonist or antagonist, is used to diagnose and treat a degenerative cartilaginous disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqp-embl/AA1996.DAT:AAR95055

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          IL-2.
```

```
A multidomain protein (AAR95055) has a FLAG epitope, a portion of human interleukin-2 that acts as a ligand domain, a non-vytotoxic portion of Pseudomonas aeruginosa exotoxin A acting as a translocation domain and the DNA binding domain of yeast GAL4. It is the product of a fusion gene (AAT29411) and can be expressed in E. coli (resulting in removal of an ompA signal peptide). It is used with an effector nucleic acid that comprises e.g. a gene to be delivered to a cell and a cognate structure for the GAL4 DNA binding suitable for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acid transfer system for gene therapy, e.g. against cancer - includes toxin translocation domain to target nucleic acid to specific cell
                                                                                                                                               414..421

GENERAL INFORMATION:
APPLICANT: Palleja, Estivill Xavier
APPLICANT: Pitchard, Melanie
APPLICANT: Pitchard, Melanie
APPLICANT: Vilato, Jordi Guimera
TITLE OF INVENTION: Human Gene Sequence of the Down Syndrome Critical
Patent No. 6251664
TITLE OF INVENTION: Region of Human Chromosome 21, Coding for A Serine-
TITLE OF INVENTION: Threonial Protein Kinase (MNB), Expressed in the
TITLE OF INVENTION: Neuronal Regions Affected in Down Syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GENERAL INFORMATION:

hypothetical protein YOR134w - yeast (Saccharomyces cerevisiae)
NAlternate names: hypothetical protein 03320; hypothetical protein YOR3320w
C;Species: Saccharomyces cerevisiae
C;Date: 15-Feb-1996 #sequence\_revision 01-Mar-1996 #text\_change 07-May-1999
C;Accession: \$60988; \$51690; \$67019; \$63865
R;Wiemann, S:; Rechmann, S.; Benes, V.; Voss, H.; Schwager, C.; Vlcek, C.; Stegemann, submitted to the EMBL Data Library, August 1995
A;Pescription: Sequencing of 51 kilobases on the right arm of chromosome XV from S. C.
A;Accession: \$60988 seq\_documentation\_block:

A. Wolecule type: DNA
A. Residues: 1-409 <WIE>

methyl-tog-binding protein 2 - rat
Methyl-tog-binding protein 2 - rat
M.Alternate names: chromosomal protein MeCP2
C;Species: Rattus norvegicus (Norway rat)
C;Decies: Rattus norvegicus (Norway rat)
C;Decession: A41907; S41461
R;Lewis, J.D.; Meehan, R.R.; Henzel, W.J.; Maurer-Fogy, I.; Jeppesen, P.; Klein, F.;
Cell 69, 905-914, 1992
A;Title: Purification, aquence, and cellular localization of a novel chromosomal pro
A;Title: Purification, A41907; MUD:92298389
A;Status: preliminary
A;Molecule type: MRNA
A;Residues: 1-492 <LEW>A;Molecule type: MRNA
A;Residues: MR

GENOME.

-I- TISSUE SPECIFICITY: PRESENT IN ALL ADULT SONATIC TISSUES TESTED.

-I- DISEASE: DEFECTS IN MECP2 ARE THE CAUSE OF RETT SYNDROME (RTT), AN X-LINKED DOMINANT DISEASE. RTT IS A PROGRESSIVE NEUROLOGIC DEVELOPMENTAL DISCABES. RTT IS A PROGRESSIVE NEUROLOGIC RETARDATION IN FEMALES. PATIENTS APPEAR TO DEVELOP NORMALLY UNTIL RETARDATION IN FEMALES. PATIENTS APPEAR TO DEVELOP NORMALLY UNTIL HAND MOVEMENTS AND DEVELOP MICROCEPHALY, SEIZURES, AUTISM, ATAXIA, INTERMITTENT HYPERVENTILATION AND STRECOTYPIC HAND MOVEMENTS.

AFTER INITIAL REGRESSION, THE CONDITION STABILIZES AND PATIENTS USUALLY SURVIVE INTO ADULTHOOD.

--- SIMILARITY: CONTAINS (R)GRP(K) MOTIFS AND SPKK MOTIFS THAT HAVE BEEN FOUND TO BIND TO MINOR GROOVE OF AT-RICH DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NEUTOIOGY 58:226-230(2002).

-i- FUNCTION: CHROMOSOMAL PROTEIN THAT BINDS TO METHYLATED DNA. IT CAN BIND SPECIFICALLY TO A SINGLE METHYL-CPG PAIR. IT IS NOT SIND SPECIFICALLY TO A SINGLE METHYL-CPGS. MEDIATES INFLUENCED BY SEQUENCES FLANKING THE METHYL-CPGS. MEDIATES TRANSCRIPTIONAL REPRESSION THROUGH INTERACTION WITH HISTONE DEACETYLASE AND THE COREPRESSOR SIN3A.

"The genome sequence of Drosophila melanogaster.";

Science 287:2185-2185(2000).

-!- FUNCTION: REQUIRED FOR THE SEGMENT-SPECIFIC REPRESSION OF HOMEOTIC

SELECTOR GENES. PC MAY BE INVOLVED IN THE STABLE TRANSMISSION OF A DETERMINED STATE BY ITS EFFECTS ON CHROMATIN STRUCTURE. PROMOTES

LOCUS-SPECIFIC CHROMATIN COMPACTION.

-!- DEVELOPMENTAL STAGE: REQUIRED DURING THE ENTIRE LARVAL PERIOD FOR NORMAL ADULT DEVELOPMENT. IT IS FOUND IN ALMOST ALL CELLS AND TISSUES THROUGHOUT GASTRULATION AND ORGANOGENESIS THOUGH AT A MUCH LOMER LEVEL THAN IN BARLY SYMOYTIAL STAGES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Homo sapiens (Human).
